Melor Bar Stool with Sleigh Metal Legs

STOOLS | CH-346-BY

The subtly inclined backrest is shaped to follow the natural curve of the body, while a high-quality foam cushion provides lasting comfort, helping to relieve pressure during extended seating.

Lightweight in construction with a slim profile, the chairs are easy to move, stack, and store, making them ideal for flexible, multi-use environments. A choice of robust steel frame options ensures stability and durability in high-traffic settings, while a variety of configurations allows the chair to adapt seamlessly to different spatial and design requirements. The Melor Series combines sculptural design with everyday practicality, offering a versatile seating solution that balances comfort, efficiency, and visual impact.

Design Notes

Designed by renowned Italian designer Claudio Silvestrin, the Melor Series brings refined, architectural style to contemporary office, education, and public environments. Drawing inspiration from the ancient art of origami, the chair features carefully engineered surface cuts that create striking three-dimensional forms, delivering a modern and progressive aesthetic suited to meeting, collaboration, and gathering spaces.

Features

- Stacking: No
- Basic assembly required
